**MOLD:** Mold consists of naturally occurring microscopic organisms which reproduce by spores. Mold breaks down and feeds on organic matter in the environment. The mold spores spread through the air and the combination of excessive moisture and organic matter allows for mold growth. Not all, but certain types and amounts of mold can lead to adverse health effects and/or allergic reactions. Not all mold is readily visible, but when it is, can often be seen in the form of discoloration, ranging from white to orange and from green to brown and black, and often there is a musty odor present. Reducing moisture and proper housekeeping significantly reduce the chance of mold and mold growth.
